The black inks used were based on blackphaly and Arabic rubber. The sheets thus formed were glued to each other laterally, forming a long strip that could have at the end two (human) sticks on which it was rolled up. The word membranae, literally "skin", is the name that the Romans gave to the parchment codex; The gift that the aforementioned districts had to accompany was almost certainly a copy of the complete work of martial, fifteen books in the form of a code and not of a roll, more common in that era. At this time different types of ink were used, usually prepared with soots and rubber, and later also with gall nut and iron sulphate. In short, even in Egypt, the world source of the papyrus, the parchment code occupied a considerable market share.[16][20] The most ancient codes that have survived outside Egypt date back to the fourth and fifth century AD and are few - different for the Bible, some of Virgil, one of Homer and little more. However, the code never gained much popularity in the Hellenistic pagan world, and only within the Christian community gained great diffusion.[15] This change took place very gradually over the centuries III and IV, and the reasons for the adoption of the code model are many: the format is cheaper, as both sides of the writing material can be used, and it is portable, searchable, and easyHide. [16] The medieval Islamic world also transit a reliable copy reproduction method in large quantities known as "control reading", in contrast with the traditional method of the scribe which, alone, produced a unique copy of a unique manuscript.
