Class X	Chapter 1 – Force
---------	-------------------

Physics

Let a weight of 100gf produce a clockwise moment about the middle point. Let its distance from the middle be d cm. Then, according to principle of moments, Anticlockwise moment = Clockwise moment $50gf \times 50 cm = 100gf \times d$ So, $d = \frac{50 \times 50}{100} = 25$ cm from the other end

Question 9:

A uniform metre rule balance horizontally on a knife edge placed at the 58 cm mark when a weight of 20 gf is suspended from one end.

- (i) Draw a diagram of the arrangement
- (ii) What is the weight of the rule?

Solution 9:

(i) Weight mg (W) of rule produces an anti-clockwise moment about the knife edge O. In order to balance it, 20gf must be suspended at the end B to produce clockwise moment about the knife edge O.

(ii) From the principle of moments, Anticlockwise moment = Clockwise moment $W \times (58-50) = 20gf \times (100 - 58)$ $W \times 8 = 20 gf \times 42$ $W = \frac{20gf \times 42}{8} = 105 \text{ gf}$

Question 10:

The diagram below (Fig 1.36) Shows a uniform bar supported at the middle point O. A weight of 40 gf is placed at a distance 40 cm to the left of the point O. How can you balance the bar with a weight of 80 gf?

4 Page

Let $P_1(x_1, y_1, z_1)$ and $P_2(x_2, y_2, z_2)$ are any two points, then the vector joining P_1 and P_2 is the vector P1 P2.

The component vectors of P and Q are

 $OP = x_1i + y_1j + z_1k$

and OQ = $x_2i + y_2j + z_2k$

i.e., $P_1 P_2 = (x_2i + y_2j + z_2k) - (x_1i + y_1j + z_1k)$ $= (x_2 - x_1) \mathbf{i} + (y_2 - y_1) \mathbf{j} + (z_2 - z_1) \mathbf{k}$

Its magnitude is

 $P_1 P_2 = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2 + (z_2 - z_1)^2}$

Position Vector of a Point

The position vector of a point P with respect to a fixed point, say O, is the vector OP. The fixed point is called the origin.

Let PQ be any vector. We have PQ = PO + OQ = -- OP + OQ = OQ -- OP = Position vector of Q - Position vector of P.

o O (origin)

Class X	Chapter 1 – Force	Physics

Solution 6: (i) Perpendicular distance of point A from the force F = 10 N at B is 0.5m, while it is zero from the force F = 10 N at A Hence, moment of force about A is = 10 N × 0.5m = 5 Nm(clockwise) = 10 N × 0.5m, while it is zero = 10 N × 0.5m = 5 Nm(clockwise)
(ii) Perpendicular distance of point B from the force F = 10 N at A is 0.5m, while it is zero from the force F = 10 N at B Hence, moment of force about B is
= 10 N × 0.5m = 5Nm (clockwise)
(iii) Perpendicular distance of point O from either of the forces F = 10N is 0.25 m Moment of force F (=10N) at A about 0 = 10N × 0.25m
= 2.5 Nm(clockwise)
And moment of force F (=10N) at B about 0 = 10N × 0.25m = 10N × 0.25m=2.5 Nm(clockwise) Hence, total moment of the two forces about O = 2.5 + 2.5 = 5 Nm (clockwise)

Question 7: A steering wheel of diameter 0.5 m is rotated anticlockwise by applying two forces each of magnitude 5 N. Draw a diagram to show the application of forces and calculate the moment of couple applied.

Moment of couple = either force × couple arm = 5 N × 0.5 m = 2.5 Nm

Question 8: A uniform metre rule is pivoted at its mid-point. A weight of 50 gf is suspended at one end of it. Where should a weight of 100 gf be suspended to keep the rule horizontal?

Let the 50 gf weight produce anticlockwise moment about the middle point of metre rule .i.e, at 50cm.

Question 3:	
(a) the ratio between their v	b 1:2 are dropped from the same height find elocities when they strike the ground, and sting on them during motion.
Solution 3:	
(a) Initial velocity, u = 0 m	's
Final velocity = v	
M ₁ : M ₂ =1:2	
From equation: v2-u2 = 2gh	
So, $v = \sqrt{2gh}$	
$\frac{v_1}{v_2} = \frac{\sqrt{2gh}}{\sqrt{2gh}} = \frac{1}{1} = 1 \div 1$	
(b) Force = mg	
$\frac{F_1}{F_2} = \frac{m_1g}{m_2g} = \frac{1}{2} = 1;2$	

	y X of mass 5 kg is moving with velocity 20 m s ⁻¹ while another body Y of mas g with velocity 5 m S ⁻¹ . Compare the momentum of the two bodies.
Solutio	on 4:
Mass o	of body $X = 5 \text{ kg}$
Veloci	ty of body $X = 20 \text{ m/s}$
Mome	ntum of body X = mass x velocity
P1= 5 >	× 20 =100 kgm/s
Mass o	of body $Y = 20 kg$
Veloci	ty of body Y = 5m/s
Mome	ntum of body Y = mass x velocity
	$0 \times 5 = 100 \text{ kgm/s}$
	$\frac{n_1 v_1}{n_1} = \frac{5 \times 20}{100} = \frac{100}{100} = 1:1$
P2 1	n ₂ v ₂ 20×5 100

Question 5:	
Calculate the acceler	ration produced in a body of mass 50g when acted upon by a force of 2
N.	
Solution 5:	
Mass= 50g= 0.05kg	
Force, F= 20N	
Force = mass x accel	eration

Mathematics is a compulsory subject till matriculation. It is an important subject and the students should prepare this in the best way. 10 class math notes with solution Å Aare available for 10th class students which is the best way of preparation. The students can get full marks in this subject through best preparation. For getting perfection in Mathematics, the students have to make more practice for math key book class 10. Download Full Math Notes 10th Class math solution pdf free download à Aand start your preparation without wasting your time. The students can get Å Amathematics notes for class 10Å Apdf donwload from here for all exercises such as Å A2.7 exercise class 10, ex 4.1 class 10 or ex 3.6 class 10 or ex 3.4 class 10 or maths class 10 chapter 1.
